DETAILED ACTION

Claim Rejections - 35 USC § 101

A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain <u>a</u> patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer <u>cannot</u> overcome a double patenting rejection based upon 35 U.S.C. 101.

Claims 1-5 are rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1-5 of prior U.S. Patent No. 6,417,323. This is a double patenting rejection.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 6-9 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yu.

The reference discloses a ring opening polymerization of a cyclic ether to produce a polyether such as an aliphatic or aromatic glycidyl ether in that R4 represents a C1-C20 alkyl (read on claim 6) or haloalkyl (read on claim 7) (see col. 3, lines 10-62; claim 1) and formula in claim 14 is read on that of claim 11.

Application/Control Number: 10/082,059

Art Unit: 1711

Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kistner. Kistner discloses an epoxy terminated silane (see col. 2, lines 40 et seq.; col. 3, lines 1-10; Examples 1-6, a glycidoxypropyltrimethoxy silane), which is read on that of claim 10. Claims 6 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over

Claims 6 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 07109351.

The reference discloses a polyether compound and glycifyl ether derivative of the formulae I-III, which is read on that of claims 6 and 11.

The disclosure of the references differs from the instant claims in that they do not disclose the broad teachings of the claimed formulae with so many variations.

However, the references do disclose specific formulae which are included in the broad claimed formulae. Therefore, it would have been obvious to one of ordinary skill in the art to select the reactants from the references within the limitations of the instant claims to get the claimed products having the claimed formulae in the absence of a showing of unexpected results derived from said selections.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Duc Truong whose telephone number is 703-308-2437. The examiner can normally be reached on Monday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James Seidleck can be reached on 703-308-2462. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9791 for regular communications and 703-872-9311 for After Final communications.
